# Burndown.pdf

Sprint 4 Burndown Chart:

For this sprint we had a velocity of around 45 points which is the same as sprint 3. The sprint velocity is high because in this sprint, we implemented many core features for the app such as group messaging, user blocking, profile viewing, and more refined user matching.

The sprint was started a day late (Tuesday) due to the CSC301 midterm. Additionally, the long horizontal line in the middle is due to the CSC309 and CSC358 assignments. Once those were completed, we were able to complete the user stories and reduce the story points to 0.
